

COVID Measures to Inform School Planning

As of August 11, 2020*

**Please note that the science of COVID-19 is evolving rapidly. The information in this PowerPoint reflects current existing models, and will be updated as-needed as guidance develops.*

Description

- The enclosed measures are offered as a tool to assist school leaders as they consider choices about on-site, hybrid, and remote learning models for their student populations.
- The existing **Ohio Public Health Advisory System** contains valuable community metrics. But 4 of the 7 indicators lag days or weeks behind new infections (increases in outpatient visits, ED visits, hospital admissions, ICU occupancy)
 - School Planning measures focus at the front end to catch increases in infections as they start
- Measures on the next slides are front-end indicators of a rise in new community infections. Schools can use these to assist in real-time decision making about remote, hybrid, and in-person learning.
 - Primary Measures: Assess how many people in the community have COVID & direction of trend
 - Secondary Measures: Community Performance Indicators - how community systems are coping
 - For Both: Proposed Thresholds for interpretation and decision support for in-person / remote / hybrid learning models

Primary measures: New Cases

1. Daily new cases per 100,000 (7-day moving avg)

Demonstrates level of virus in community

2. Trend line of daily new cases per 100,000

Indicates whether cases are increasing or decreasing

Secondary measure: Community Performance Indicators

Percent of COVID tests that are positive

Demonstrates adequacy of community testing (and prevalence of disease)

Also consider (not shown here): Positive test rates in asymptomatic people; Time from test to result (“turnaround time”); Contact tracing success rate

For all In-Person Learning, at all levels:

Measure implementation of reliable & bundled protection protocols

- **Bundle: Stay Home when Sick, Distancing, Masking, Hand Hygiene, Cleaning** (*see Harvard link below*)
 - Also consider Cohorting, Ventilation
- School measures of daily cases and quarantine
- Important to maintain protocols consistently over time
 - Create systems to track school cases over time
 - Measure implementation of protection protocols
 - If protocols cannot be maintained, consider remote / hybrid models

Primary Measures and Proposed Thresholds

Below is an adaptation of suggested thresholds from Harvard Global Health Institute (*see link below for original recommendations*). Schools should consider student needs and ability to implement protection protocols as they make the decision for their district.

Category	Daily New Cases per 100,000	Schools should:
Red	>25	Encourage remote learning for all learners when possible
Orange	10<25	Consider remote or hybrid learning unless Community Performance Indicators (<i>slide 3</i>) met. If Community Performance Indicators are met, proceed to Yellow box:
Yellow	1<10	<p>Consider if school protective protocols can be strictly implemented (<i>see slide 4</i>)</p> <ul style="list-style-type: none"> → If no, consider remote or hybrid learning → If yes, consider return to in-person with possible prioritization & phase-in: <ul style="list-style-type: none"> • Priority 1: preK-5, special education through 8th • Priority 2: grades 6-8 and special education for grades 9-12 • Grades 9-12: <ul style="list-style-type: none"> ○ Not a priority in Orange – continued remote or hybrid learning ○ Return in Yellow on hybrid schedule IF distancing can be maintained for all grades, majority of time
Green	<1	All grades in school with strict protection protocols

Daily new cases per 100,000 (7-day moving avg)

Seven day moving average of new COVID-19 cases per 100,000 people

Previous two weeks in bold

Levels are those suggested by Massachusetts Testing, Tracing, and Supported Isolation collaborative. Information can be found here: <https://ethics.harvard.edu/tai-technical-handbook>.
Data from The New York Times, based on reports from state and local health agencies. <https://www.nytimes.com/interactive/2020/us/coronavirus-us-cases.html> Pulled: 2020-08-12
Population estimates from US Census Population Estimates Program, Vintage 2019

Values when selected other countries opened schools: Denmark = 3.3, Germany = 0.8, Norway = 1.6

Trend line of daily new cases per 100,000

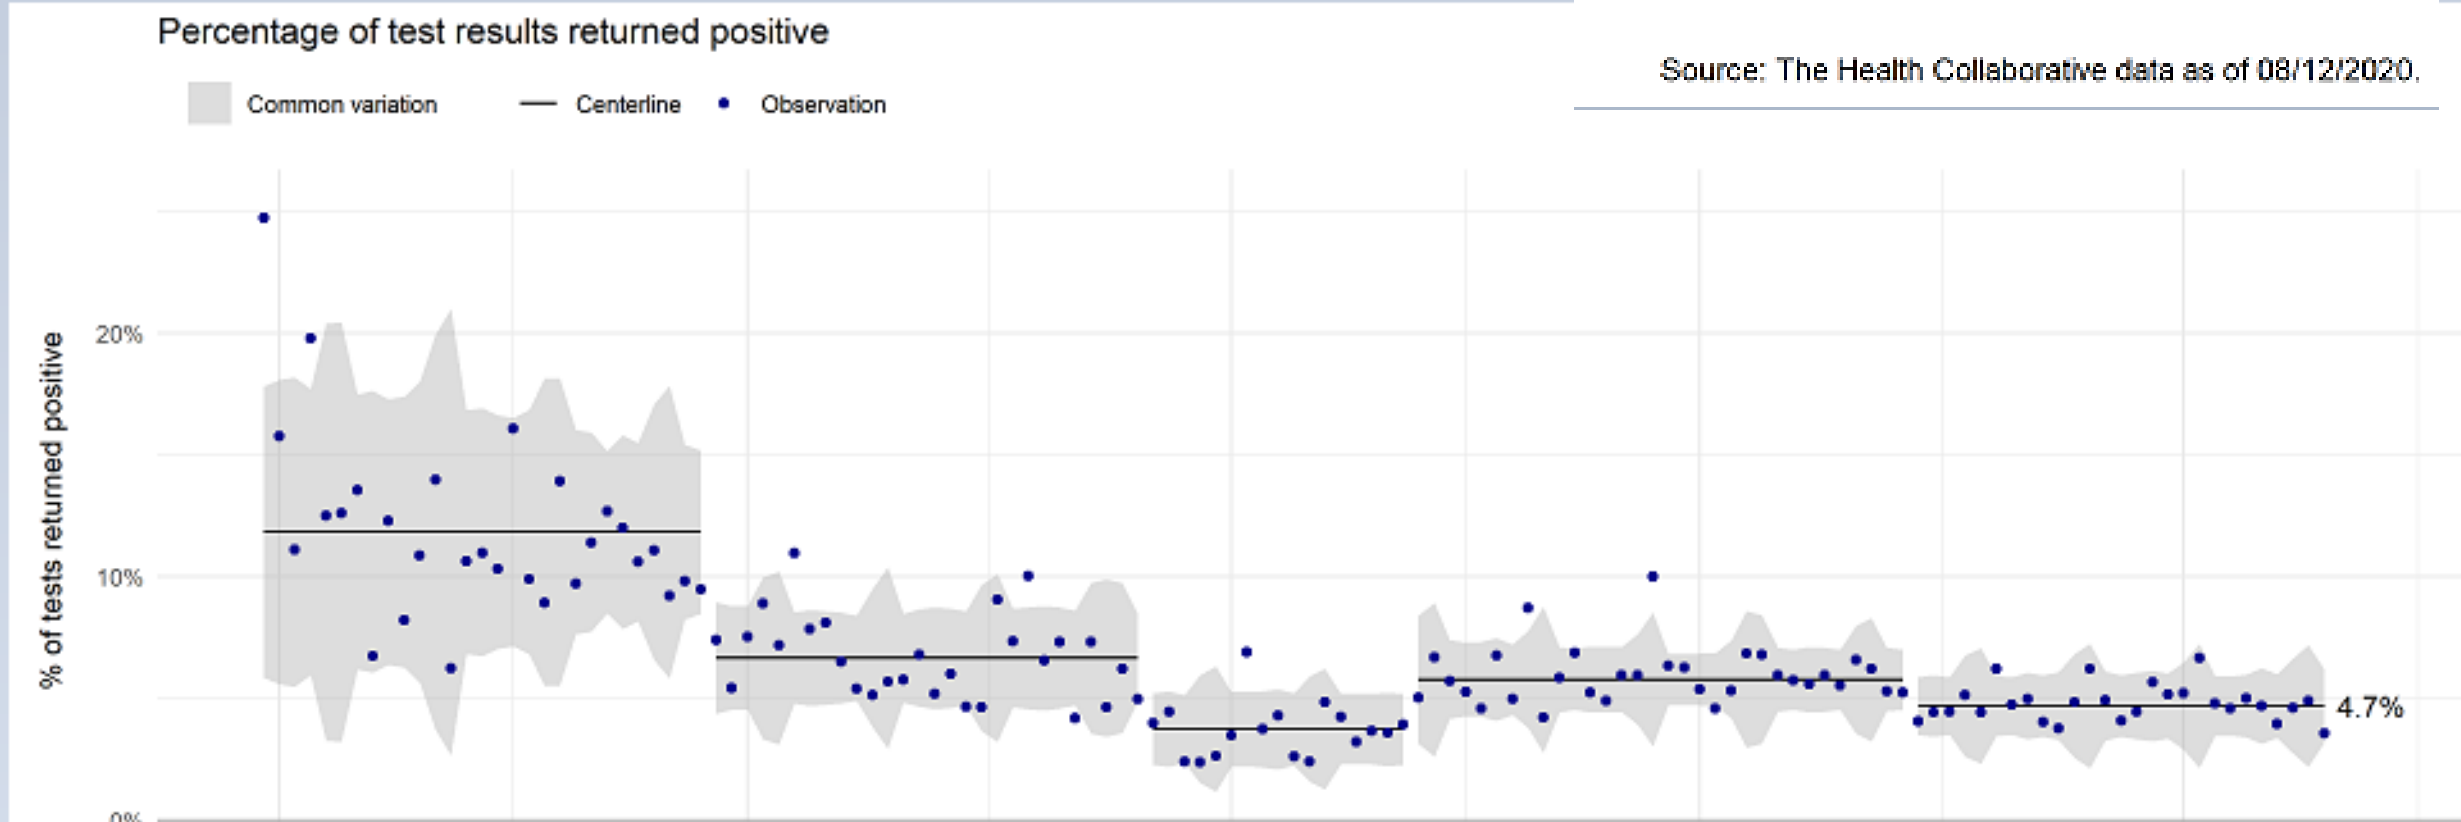

Previous 2 weeks in **BOLD**. CDC positive indicators for continued re-opening:

- 9 of past 14 days declined
- 14th day less than 1st day
- REBOUND = 5 consecutive days of increase

Secondary Measure: Percent of Covid tests that are positive

- Goal: < 5% (CDC)*, <3% (Harvard)**

14-county region
